∗1 This is the value that measured on measuring board with capacitor of 22μF at 150mm from output terminal.
Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM103).
∗2 At the G module, ripple is 120 mV(Ta=0 to 50℃) 160 mV(Ta=-20 to 0℃) at 5% or less load because of reduction of standby power.
∗3 At the G module, ripple noise is 160mV(Ta=0 to 50℃) 200mV(Ta=-20 to 0℃) at 5% or less load because of reduction of standby power.
∗4 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25℃, with the input voltage held constant at the rated input/output.
∗5 Figures for 0 to rated current.The current not measured side is rated current. (module E, F, P, Q).
∗6 The output is shut down when the overcurrent state continues for 5 minutes.
∗ To meet the specifications. Do not operate over-loaded condition.
∗ Parallel operation is not possible.
∗ Sound noise may be generated by power supply in case of pulse load.

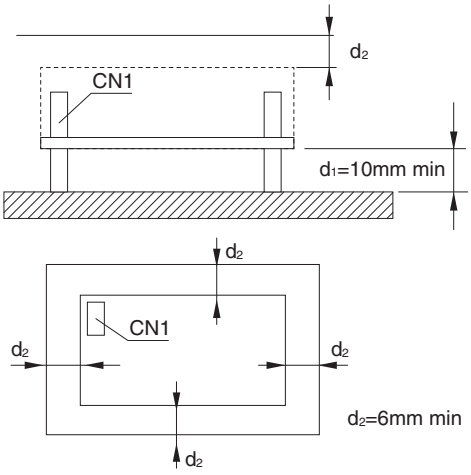
Assembling and Installation Method

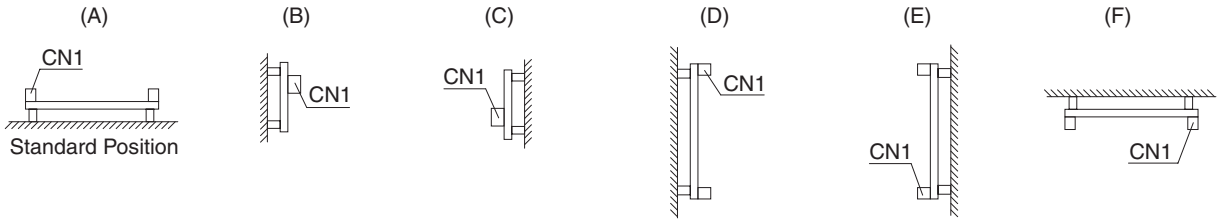
Mounting method

■This power supply is manufactured by SMD technology.
Do not touch any SMD components on the unit. Be especially careful when handling.

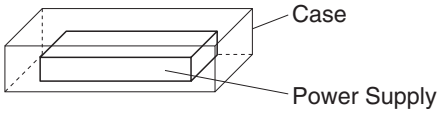
■If using a metal chassis, keep proper insulation between the component and metal chassis, use the spacer of 10mm or more between bottom of power supply and metal chassis.
If d1 and/or d2 are less than the value mentioned in right figure, insert an insulating sheet with reinforced insulation between the power supply unit and metal chassis.
The following distance is not satisfactory for cooling condition.
Please refer to "Derating" and Instraction Manual 4 for cooling method.



■Installation method shown below is possible.

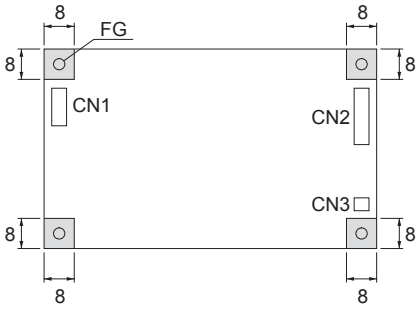


■There is a possibility that it is not possible to cool enough when the power supply is used by the sealing up space as showing in right figure.
Please use it after confirming the temperature of points 1 through 5 of Instraction Manual 4.

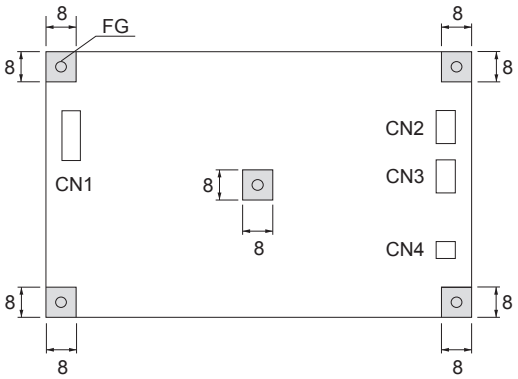


■The mounting screw should be M3. The hatched area shows the allowance of metal parts for mounting.

●RBC200F



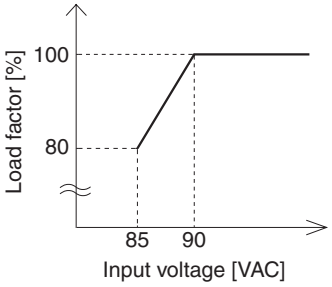
●RBC300F



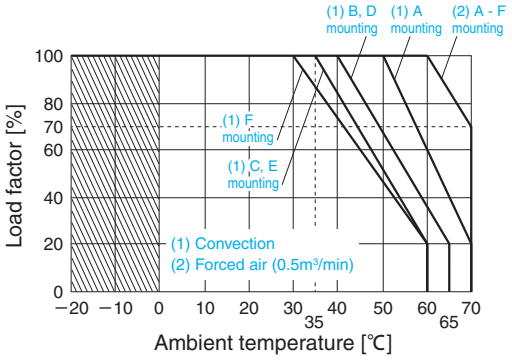
Derating

■Refer to the Instruction Manual 5 and 6 for the definition of load factor.

●Input Voltage Derating Curve



●Ambient Temperature Derating Curve (Reference value)



∗Specifications for ripple and ripple noise changes in the shaded area.

■Please make sure the maximum component temperature rise given in Instruction Manual 4 is not exceeded.
